Project:

Cheboygan Community Hospital

Specification:

Geogard Coating System
24,000 square feet

Details:

The existing fourteen year-old PVC-based single ply roof had started to show signs of wear. This 24,000 square foot roof also had an abundance of rooftop equipment, conduit, and various pipes making it an expensive roof to replace.

Republic's Geogard system was presented as a solution to their problem to provide a cost savings of over 60%.

A two-coat urethane system was applied over the existing single ply roof system. Installed by Republic's Registered Contractor, Doyle Inc. Roofing, the hospital building received a 12-year labor and material waterproofing warranty.
